

Content Management Tool: “UsiCMS”

Brief description

This tool will be based on the UsiXML technology and thus will be able of delivering web content based on the $\mu 7$ paradigm.

Features

It will integrate the following features:

- **A UsiXML editor** which will support a subset of the UsiXML language, related to the multi-device aspect.
- **Some rendering engines** to generate at least HTML pages, Swing user interfaces, simplified HTML pages for mobile phones and Ajax GWT user interfaces.
- If possible, some portlets, based on models described in UsiXML.

[FAQ](#)

Inputs

- Textual and multimedia content.

Outputs

- A website running on multiple devices type (with different screens resolution)

Planned version of the tools

- 2010 - The first version will use “portlets” to manage the content
- 2011 - The second version will add the UsiXML technology to make the website available in the $\mu 7$ context.
- 2012 - The final version will introduce the models directly described with UsiXML.
