Form Management SaaS Service: "UsiForms"

defimedia
INFORMATION·MANAGEMENT

Brief description

This tool will be used to manage forms written with UsiXML and to make them available as a web service. With it, it will be possible to upload a UsiXML form. The server will manage and store every encoded data as with the Model View Controller Design Pattern. The end user will receive only HTML pages with eventually some Javascript.

This service will be delivered as a "Pay on demand" service.

Features

It will integrate the following features:

- **A UsiXML uploader and parser** to generate web forms
- **A persistent storage** for encoded data
- **A MVC and web service** for more flexibility

Furthermore, the Java/Swing Abstract Interface Editor will enable UsiXML document creation
